Management
Post Construction

Completion

June 2004

Expertise

Quality Control & Inspections
Contract Administration
Safety Monitoring
Project Close Out & Walk
Through
Project Warranty

Delivery Method

Negotiated – 8a

Market Segment

Federal and K-12 Education

Situation > Fort Bragg is a large United States Army installation located in North Carolina, which has a population of nearly 40,000 and a current school enrollment of approximately 5,230 students. Fort Bragg sought a qualified commercial contractor to complete single-story additions to existing elementary schools concurrently and in time for the new school year.

Action > The project included the construction of four additional classrooms and four handicap private restrooms to each of the three elementary schools. T&G was tasked daily with maintaining a safe separation between the pedestrian path (used by hundreds of children and parents) and construction traffic.

Through our construction technology expertise, T&G was responsible for adding a media center with the latest electronic data capability.

Results > With precision, T&G avoided delays, ensured quality and provided timely completion of the project.
